<b>1.00PM</b>	LUNCH
<b>1.30PM</b>	FINISH

## Presentations

### KEY PRESENTATION

#### PHIL RIDLEY - e-Wars: Google vs Facebook

Online advertising is getting more complicated by the day. Many "keep it simple" by focusing on Google adwords. But are you missing a trick? Do you know about all the new tools Google has to offer? And what about Facebook? These guys are gunning for Google and want a slice of the advertising pie. So what do Google and Facebook have to offer and what should you use? Come along to Pestech and find out!

#### FMC - Formulations & applications

FMC will explain the difference between a selection of chemical formulations, and how using the best formulation for certain conditions will give you the very best result. FMC will also give a brief introduction to FURY, an exciting new insecticide combination soon to be released.

#### BASF - BASF Non-Repellent Solutions

Although non-repellent pesticides have been used in the pest control industry for a number of years, their full capacity and efficacy has yet to be harnessed. This has in part, been a result of suitable products not being registered and approved for use for the necessary situations. In recent years however, these limitations have been removed with BASF launching a number of non-repellent products for use across various situations and pests. In this presentation we consider what non-repellent chemistries really are, where they fit best and how to select the correct non-repellent for different situations. We also investigate how using the BASF range of non-repellent pesticides in a solution package can lead to improved levels of control, increased treatment flexibility, improved resistance management and the capacity to develop an effective IPM program.

#### SUNDEW - PROFESSIONAL SOLUTION

Sundew is excited to present the launch of the next generation of insecticidal dusting solutions – Starrdust@PRO. New Starrdust@PRO is revolutionary in pest management because it combines a powerful double strength knockdown adulticide (permethrin 40:60 cis) as well as a long lasting Insect Growth Regulator (triflumuron) larvicide. With Starrdust@PRO pest management professionals can offer unprecedented results. To find out about this and other innovative new features which make this the product of choice for pest professionals be sure to attend Pestech 2015. You won't want to miss this one!

#### HANDS ON DEMO

**SYNGENTA** - Syngenta Tomorrow's termite solution is already here. Whichever way you look at it, ALTRISSET is the ultimate choice for Australian Pest Professionals. The interactive presentation will explain why ALTRISSET is the new standard in termite control and will demonstrate how ALTRISSET is safer for you and deadly to termites.

#### SUMITOMO - Termite Baiting - Some tricks of the trade

For in-ground installations a lot of factors influence the success of baiting including soil type, availability of moisture and correct placement of stations. Similarly for above ground baiting, many factors come into play – particularly correct placement at the feeding front and bait moisture content. Many experienced bait practitioners also have their own tricks such as moistening with "Gatorade" and the addition of other "special" ingredients which supposedly enhance feeding.

#### BELL- BELL –Rodent Control Tricks of the Trade.

4 lines of defence. Lets go Backwards;  
4th Line; Inside the building  
3rd Line; outside building (within 2 Metres)  
2nd Line; Fence lines,  
1st Line; Burrow baiting
